

**t+ diabetes – Website Users**

All website users are allocated a role which controls the level of access they have to various functions and the scope of the data they can access. The roles are arranged in a hierarchy allowing certain users to administer lower levels of users.

**User Hierarchy**

**Clinic**

Users can view items at their level and lower level of the hierarchy.

**Role**

Feature	Clinic Administrator	Healthcare Professional	Patient
Access secure website	●	●	●
View patient stats	●	●	●
View and edit site details	●		
Manage clinic staff	●		
View patient diaries	●	●	●
Add patient notes	●	●	
Message patients	●	●	

## Overview Of Functionality

### Secure website

Website access is encrypted by 256 bit SSL, username and password is required.

### Manage clinical staff

Administration of clinical staff at a specific site can be managed by a healthcare professional or clinic administrator – each of which has varying degrees of control.

### Manage patient alerts

Administrative staff can remotely monitor patient alerts including hyperglycaemic and hypoglycaemic status updates. Alerts can be sent to specified administrative cell phone as SMS text and/or directly to specified email address.

### View patient diaries

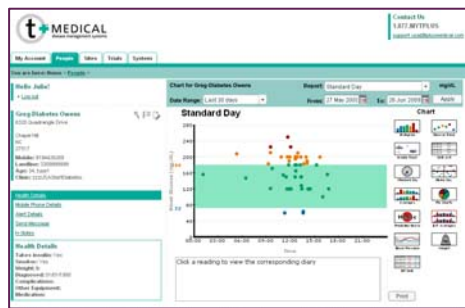

Diaries submitted by a patient can be easily accessed, and filtered by date range then viewed individually to see answers to diary questions as well as submitted glucometer readings. Graphs and charts are also viewable by both patients and administrative staff.

### Add patient notes

Patient-specific notes can be added to the log for a patient.

### Message patients

The system supports instant SMS or secure t+ messaging from the healthcare professional to a patient.
