

Description:
Circadian Rhythm (CR) is normally a good 0.2— 0.5.

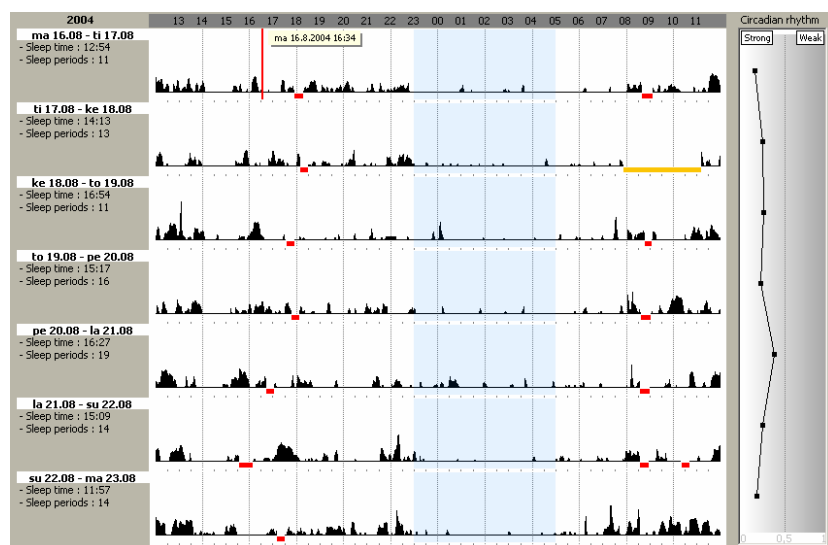

Rapidly worsens to a poor 1.4. Monday night is restless and on Tuesday there is almost no sleep at all, CR is reversed (score > 1). Daytime activity is very low on Monday. When interviewed on Tuesday, customer is feeling unwell, complains of headache and tiredness.

Actions:

Customer visited his doctor and a Urinary Tract Infection was diagnosed after examination and laboratory tests. Infection treated with antibiotics.

Result: 1 week later

The customer's condition returned to normal and the Circadian Rhythm normalized.

WristCare can send manual and automatic alarms directly to all UK Community Alarm Services, as well as sending Activity Data to Care Managers.
