

## WristCare Falls Management System

### Client Profile:

An older person with recurrent falls, or a person assessed as being at increased risk of falling

### Key features:

- ✓ Manual alarm
- ✓ Non-Compliance alarm
- ✓ Deterioration alarm
- ✓ Fully compatible with all UK Community alarm centres
- ✓ Falls Prevention night lights (twin pack)

### Social Services benefits:

WristCare enables compliance management, it lets you know if it is not being worn, ensuring your client is protected all of the time.

The manual alarm is available day and night-time to call for help after a fall. The recessed alarm button significantly reduces the number of false alarms.

If a user is unable to manually call for help following a fall, an inactivity alarm would be generated, ensuring help is always provided to the client, even if they appear to be unconscious. This reduces the client's fear of not being found therefore promoting more confidence, activity and independence.

Reducing falls lessens the dependency on health and social care needs and is likely to delay admission to residential care.
