

WristCare Manual Alarm System

Client Profile:

A vulnerable person who needs access to a social alarm that can be worn 24 x 7

Key features:

- ✓ Manual alarm
- ✓ Low battery alarm
- ✓ Fully compatible with all UK Community Alarm centres

Social Services benefits:

WristCare has a higher than average compliance factor when compared to a pendant alarm: it is worn on the wrist in a way that most people prefer. It enables scarce social care budget to be effectively utilised.

It is designed to be worn 24 hours a day therefore providing protection all of the time. It is worn in bed and therefore provides protection when the client needs to get up during the night. WristCare is always at hand.

The recessed alarm button is extremely difficult to **accidentally** trigger, this reduces the number of false alarms made to a Community Alarm Service.

It supports independent living and allows older vulnerable people to remain living safely and securely at home for longer.
